THE 12 C’S OF COMMERCIALIZING INVENTIONS AND INNOVATIONS

CUSTOMER INSIGHTS
Curiosity precedes creativity – although customers may not know what they need until you show them. Provocative questions, predictive analytics, and market intelligence can spark innovation.

CONCEPT CREATION
The fuzzy front end of innovation (open or closed). A smart concept, product, or process improvement is the foundation for all that follows.

COLLABORATION
Partners and strategic alliances can improve and expand upon ideas. Internal collaboration, leadership support, and champions are equally important.

CONCEPT PROTOTYPING/VALIDATION
Prototyping reduces risks, proves feasibility, reveals errors/omissions in requirements, and accelerates time to market. Packaging and design enhancements happen here.

CRITICAL PATH ANALYSIS
Prioritizing project tasks, estimating resource allocation, and leveraging innovation management tools ensures sustainable value creation.

CAPITAL AND FINANCING
Obtaining financial capital increases the likelihood of entry and sustainable value creation (success).

CONCEPT PROTECTION
Protection of intellectual property makes it difficult for competitors to steal/imitate ideas.

COST STRUCTURE
Defining value segments and product costs as well as revenues, profitability, and break even points versus the competition ensures sustainable growth.

CHANNEL MANAGEMENT
Access to distribution channels makes or breaks new ideas and products. Formalized selling/servicing programs create competitive advantage.

COMMUNICATION
Commercialization requires time-consuming communication with employees, consumers, buyers, and partners thru media, marketing, and sales.

COMMUNITY BUILDING
Diffusion of innovation (crossing the chasm to achieve a “tipping point”) is driven by persuasion and key constituency relationship building.

CONTINUOUS IMPROVEMENT
The best ideas and innovations are anchored in a process of continuous improvement.
APPLYING THE 12 C’S
